

Communicable disease policy: As a matter of policy, students with active communicable diseases are not allowed in La Verne ATP clinical settings until restored health has been verified by a Student Health Center (SHC) physician and written documentation has been submitted to the La Verne ATP Clinical Education Coordinator. If the student has been under the care of an outside physician for an illness, written documentation verifying restored health from that physician may be submitted to the SHC for review and verification. Due to standards of patient confidentiality, it will usually not be possible to submit documentation from an outside physician directly to the Clinical Education Coordinator, and students should plan on providing information to the SHC prior to being cleared to resume activity in La Verne ATP clinical settings.
